

Tools for the tiniest of hands: KS Tools for Kids

- **Toy tools perfect for children's hands**
- **Stimulates creativity and the play instinct**
- **Chosen by mums**
- **Already tested out by the mechanics of tomorrow**

Children are the mechanics of the future. However, their toys do not always stimulate their urge to discover through play. Heusenstamm-based KS Tools has now developed a new product line just for children three and over: KS Tools for Kids. These are tools for the tiniest of hands that will let them get really creative. The individual components are also designed to make the tools ergonomic and completely safe for children to use. What makes this assortment unique is that it was put together by mums – after all, they know exactly what their little ones like playing with most. Complementing the professionally assembled tool sets are smart bags, rucksacks and tool boxes, while matching colouring books and pencil crayons are sure to supply inspiration for their next building project. And in case all this work makes them hungry, KS Tools has even prepared some tool-style cutlery.

Like their counterparts for adults, these children's tools are only available from specialist retailers, and KS Tools has launched a dedicated catalogue especially for them.

"We want children to come into contact with tools through play," explains Orhan Altin, Managing Director of KS Tools. "Only then will they also become curious about manual trades and try out their own skills. Children often want to help their parents with DIY jobs around the house, but adult tools are off limits for them. This is where the tools from our KS Tools for Kids product line come in." Parents know exactly what things their children get on best with, so this assortment has been put together by a group of mums. And it has been tested out by some real experts: the children of KS Tools staff. Whether they go for the safety set complete with helmet, vest and protective goggles or the work bench with a whole range of different tools, children will be able to handle the new tools just as professionally as their parents do theirs. Their play instinct will be stimulated and their creativity aroused. And, while playing with their hammer, spanner and work bench, it just so happens that they might forget about their favourite electronic devices such as their tablet or smartphone.

Tools that are child-friendly and safe

Although the tools in the sets are designed to be child-friendly and safe, they offer just as much in terms of their look and functionality as those intended for adults. However, the designers at KS Tools have taken great pains to ensure that the little ones cannot get injured. Needless to say, the toy tools make just as meaty a sound as their parents' originals. It also goes without saying that the tools are designed to allow children to handle them easily – being lightweight, they sit nicely in the little explorers' hands.

Encouraging creativity and the play instinct

The colouring books from the KS Tools for Kids series will give an additional boost to creativity and the play instinct. Colouring in with the matching colouring pencils will lead children towards more ideas for other new things they could build with their own tools. And the picture book entitled Ein Haus wird gebaut ("Building a House") will show the little ones how many steps it takes before you have a finished house. This book is similarly built around the concepts of learning and having fun in equal measure. Finally, after their work is done, the children can use the matching tool-style cutlery from KS Tools for Kids to enjoy their next meal with.
